

ABSTRACT OF THE DISCLOSURE

An albumin preparation that prevents onset of hepatic encephalopathy caused by conventional amino acid preparations and enhances an effect of improving the symptoms is provided. The albumin preparation containing amino acids is characterized in that a content of albumin is 0.01 to 1.0 w/v%, a content of plurality of amino acids containing branched amino acid is 5 to 10 w/v%, a content of the branched amino acids is equal to or more than 30 w/w% on the basis of the content of total amino acids and further, the Fischer ratio (branched amino acid/[phenylalanine + tyrosine] (molar ratio)) is equal to or more than 20.
